Web Applications Power the World

Course Introduction

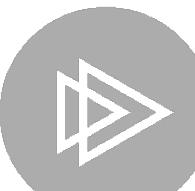

Internationalize and localize an e-commerce site

Apply internationalization requirements

- Prepare the application
- Configure application dependencies

Localize the application

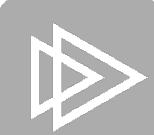

- Translate text
- Data format
- Consider right-to-left languages
- Handle currencies

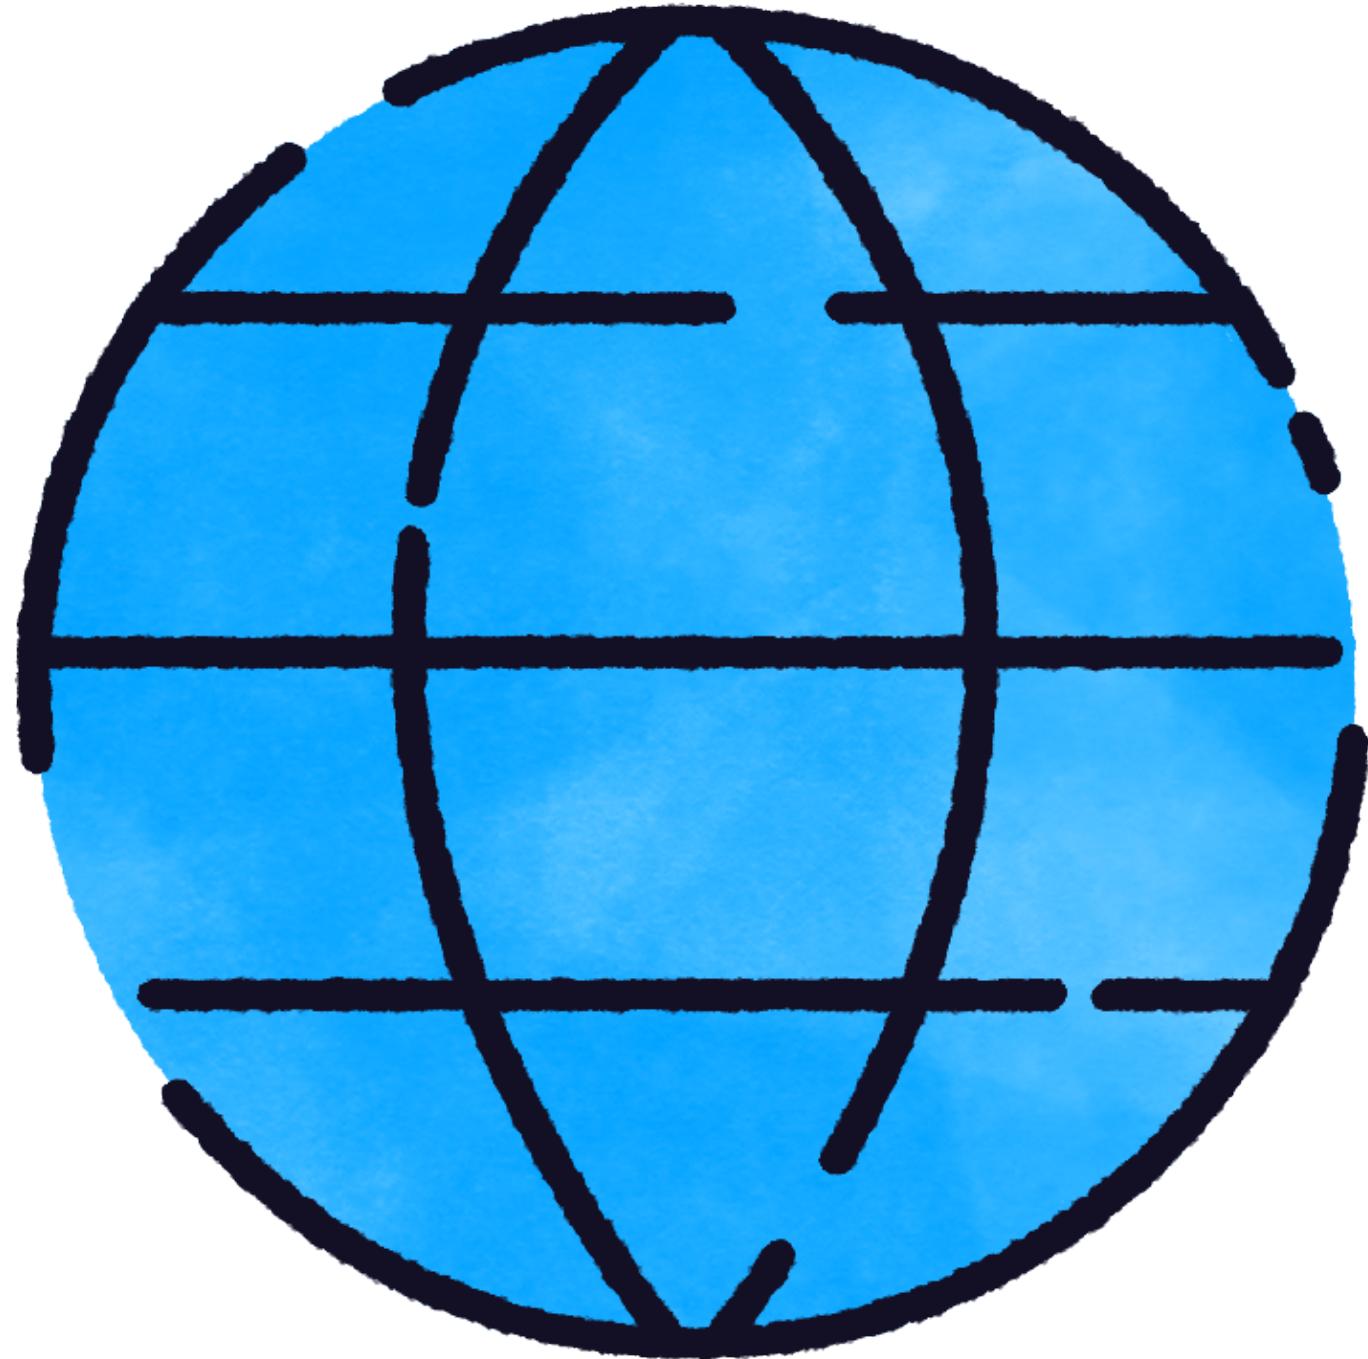

Basic Angular

Angular CLI

angular.json

Start with Internationalization

Prepare your app for internationalization (i18n)

Ensures the app can support languages and regions

Apply Good i18n Practices

Use Angular pipes

Consider UI text

Space between HTML elements
